

# VAN RAMP

**T**his three section, manually operated van ramp, designed by PVI, is the solution for those people needing a reliable, affordable van ramp. This ramp is designed to be mounted to the floor of the van. No assembly is required and it is easily installed.

The ramp is constructed of aluminum and is spring assisted making the ramp easily operated by

a single individual. There is a high traction tape on the surface of the ramp.

This ramp folds into three sections and stores vertically inside of the van. The van ramp is ideal for loading both scooters and wheelchairs. The width of the ramp is 27 inches and can be ordered in 7 foot or 8 foot lengths. The load capacity is 600 lbs.
